

# ProFil™ Flow

## Flowable Composite

The excellent flowable consistency characteristics makes ProFil™ Flow an ideal composite for filling cavities.

### Features & Benefits

- Excellent esthetic properties.
- No oozing or slumping.
- Perfect for minimal invasive restorations.
- Low Viscosity.
- Maximum versatility.
- High polish retention & stable color match.
- Low shrinkage.
- Radiopaque for useful diagnostic and excellent identification under x-ray.
- Used in Light-cure modes.
- excellent biocompatibility.

\* Available in 8 shades.

Light Cured

Ready For Application

Radiopaque

### Properties

Flexural strength	> 145 MPa
Water absorption	3.77 - 17.5 µg/mm <sup>3</sup>
Water solubility	3.25 - 4 µg/mm <sup>3</sup>
Curing time	20 secs

COMPOSITES

"Polishes very well"

"Flows well and seems to adapt well to tooth surface"

"Good viscosity, stays in place"
